Practical Hands-On Questions

CI/CD

- Build a GitHub Actions/Jenkins pipeline that:
    - Runs tests
    - Builds a Docker image
    - Pushes to ECR
    - Deploys to Kubernetes

CloudFront

- Configure CloudFront in front of an S3 static website.
- Restrict direct S3 access.
- Configure cache invalidation.

ASG + ALB

- Create:
    - Launch Template
    - Auto Scaling Group
    - Application Load Balancer
    - Target Group
- Configure scaling when CPU exceeds 70%.
- Demonstrate automatic replacement of unhealthy instances.
